3D-printed details for model railroads

Welcome

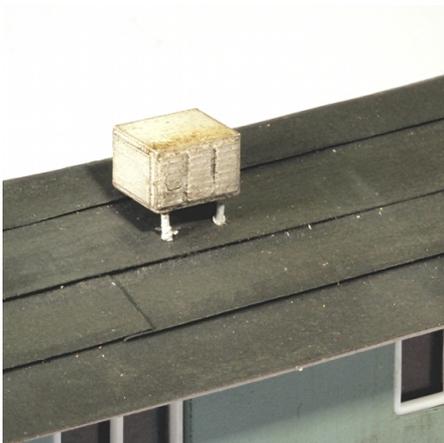

This is the first newsletter of 3ddecodetails.com! It will be published in irregular intervals and will inform you about new 3D-printed products, available via imaterialise.com.

At the moment the main goal lies on accessories for N-scale model railroaders to detail their model railroads.

You will already find cooling units and air conditions, air ducts, tanks, tire stacks, exhausts and even a complete mobile home - all in N-scale.

Cooling Units Air Conditions

In any hot&dry region nobody wants to live without some cooling devices. This might be a small air condition like this one mounted on a roof:

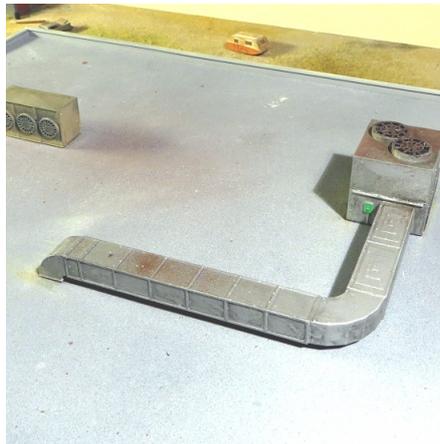

Or it could be a large cooling unit on the roof of a cold storage:

Air Ducts

Whenever you need to move hot or cold air you also will need ducts - here is an example in N-scale:

A whole system of ducts will follow soon.

Tanks

In a lot of industries tanks of any sizes are needed for storage of fluids and gases. But you can use them not only for detailing some industry but also as a cargo for your cars:

Tire Stacks

A neat detail are tire stacks - here some huge tires at a tire dealer:
